📄 OLA Data Analyst Project – Power BI Q&A

📊 Dashboard Structure & View Segregation

The Power BI dashboard is organized into five key analytical views to provide a comprehensive understanding of ride booking performance:

1. **Overall Analysis**
    - Ride Volume Over Time
    - Booking Status Breakdown
2. **Vehicle Type Analysis**
    - Top 5 Vehicle Types by Ride Distance
3. **Revenue Analysis**
    - Revenue by Payment Method
    - Top 5 Customers by Total Booking Value
    - Ride Distance Distribution Per Day
4. **Cancellation Analysis**
    - Cancelled Rides Reasons (Customer)
    - Cancelled Rides Reasons (Driver)
5. **Ratings Analysis**
    - Driver Ratings
    - Customer Ratings

📌 Power BI Visualizations & Answers

1. Ride Volume Over Time

A **time-series line chart** displaying the number of rides over days/weeks to identify trends and demand patterns.

---

2. Booking Status Breakdown

A **pie or doughnut chart** showing the proportion of booking statuses such as:

- Successful rides
- Cancelled by customer
- Cancelled by driver

---

3. Top 5 Vehicle Types by Ride Distance

A **bar chart** ranking vehicle types based on the total distance covered, helping identify the most utilized vehicle categories.

---

4. Average Customer Ratings by Vehicle Type

A **column chart** comparing average customer ratings across different vehicle types to evaluate service quality.

---

5. Cancelled Rides Reasons

A **bar chart** highlighting the most common reasons for ride cancellations by:

- Customers
- Drivers

This helps in identifying operational issues.

---

6. Revenue by Payment Method

A **stacked bar chart** showing total revenue generated through different payment methods:

- Cash
- UPI
- Credit Card
- Debit Card

---

7. Top 5 Customers by Total Booking Value

A **leaderboard/table visual** listing the top customers based on their total spending, useful for identifying high-value customers.

---

8. Ride Distance Distribution Per Day

A **histogram or scatter plot** showing how ride distances vary across different days, helping analyze ride patterns.

---

9. Driver Rating Distribution

A **box plot** visualizing the distribution of driver ratings across vehicle types, helping detect variability and outliers.

---

10. Customer vs Driver Ratings

A **scatter plot** comparing customer ratings with driver ratings for each ride to analyze correlation and service consistency.

🎯 Conclusion

This Power BI dashboard provides a structured approach to analyzing ride booking data by segmenting insights into performance, revenue, cancellations, and customer experience. Each visualization is designed to answer a specific business question and support data-driven decision-making.
